

## Surface Handling Tool

Thru-Tubing Technology | Product Code | WT - 1509

### Features

- Safe manipulation and feeding of the coil from the reel into the injector head
- Robust double-knuckle and thrust bearing
- Supplied to suit many diameters of coiled tubing

### Benefits

- Linear flexibility via the double knuckle
- Bearings enable free rotation while the tool is in tension
- Field redressable

**The Surface Handling Tool is a device used in conjunction with a winch and the Stabbing Pulley for manipulating and safely, feeding the coil from the reel, and into the injector head.**

The Surface Handling Tool incorporates a robust double-knuckle and thrust bearing. The knuckle provides maximum linear flexibility, while the bearing enables free rotation while the tool is in tension. It suits all sizes of coiled tubing.
