

TKC™ 4040 HOI

Connection Technology | Semi Premium

Features

- Enhanced connection structural strength for high torque and multiple make and break capabilities on non-upset connections
- High torque make up and internal flush bore shields threads from sandy oil production
- Tubing sizes: 2.375 in. to 4.5 in.

Benefits

- Cost-effective solution for salvaging API EUE 8RD tubing with insufficient upset remaining for a thread re-cut

The TKC 4040 HOI is a non-upset threaded and coupled connection which combines Hunting's 4040 threadform and integral shoulder to create an internally flush bore.

It is designed specifically for heavy oil applications, providing high torque and multiple make and break capabilities on non-upset connections.
