

Flow Tubes

Titan Division | Wireline Hardware

Hunting's Titan Division manufactures flow tubes for use with wireline grease injection control heads. Flow tubes are sized with close tolerance to the diameter of the wireline/cable being used. Grease is then pumped into the annular void between the flow tube and the cable creating a pressure drop across each flow tube to create a hydraulic seal. Flow tubes are precision drilled from solid high strength steel bar for improved wear resistance and offered in various sizes.

10 Inch Flow Tubes (Other sizes available upon request)
