

Split Skirt Two Piece Wire Finder

Slickline Downhole Tools

Features

- Two-piece assembly allows different sized skirts to be run with a single top sub.
- Internal threads to add a spear or wire grab.

The Hunting Split Skirt Two Piece is designed to locate and ball the upper end of the broken cable in the wellbore during fishing operations. The wire can then be engaged by a wire grab for retrieval.

Consisting of a top sub and a split skirt, the skirt can be removed and replaced with different sized skirts suited to the well. Internal threads allow a spear or wire grab to be combined, converting the tool to a finder/grab to facilitate fishing operations.

The wire finder is deployed into the well attached to a light fishing tool string by means of a dummy rope socket and jar up to shear pulling tool. Once the wire finder has located the end of the broken wire and a weight loss is observed, jarring down for a minimal distance will ball the broken wire in the wellbore.

Hunting Split Skirt Two Piece Finders are available in all common industry toolstring sizes and are manufactured with either sucker rod or fishing neck connections as per customer requirements
