

## Wire Clamps

### Slickline Downhole Tools

**Wireline clamps for fishing are designed to fasten around the cable and secure it to prevent movement.**

Primarily used to hold the line above the closed WLV (Wire Line Valve) during fishing operations, the clamps are fitted with brass inserts that are sized to the cable.

Certified shackles are incorporated into the design should the clamp need to be hung above the WLV instead of resting it on the WLV.

Wire clamp assemblies are load tested and supplied to the client complete with appropriate documentation.

#### Wireline Clamp (Klein)

**Wireline clamps manufactured by Klein are designed to fix around cable to prevent movement. The jaws are lined in bronze to prevent damage to cable when engaged.**

Primarily used to hold the tool string stationary when rigging up / down ensuring safety first, these clamps can also be utilised during non-routine operations such as repairing loose wraps on the drum, security when lifting over the line, fishing operations, and more.

These clamps are offered with a chain or steel wire rope permanently attached that is used to secure the clamp

Wire clamp assemblies are load tested and supplied to the client complete with appropriate documentation

#### Available with a choice of:

- Slickline or Braided line models.
- Chain or Certified Sling and Chain fixture.
