

Releasable Rope Socket

Slickline Downhole Tools

Features

- Secondary fishing neck for recovery
- Multiple size drop bars
- Field redressable

Benefits

- Eases fishing operations by leaving a clean fishing neck after activation
- Reduces operational cost and risk during wireline operations

The Hunting Releasable Rope Socket is designed to release in the event tool string cannot be recovered and the wire should not be separated from the rope socket.

The release trigger is activated by a drop bar, similar to a GO-Devil, which is installed onto the wire and released into the well.

When the drop bar contacts the release trigger, the collet releases the lower fishing neck. The upper housing and drop bar are retrieved to surface leaving a clean fishing neck.

A Releasable Rope Socket is multi-functional in that it can be used for both slickline and braided line by changing the internal clamping mechanism.
