

Otis® R Running Tool Slickline Downhole Tools

The Otis® R Running Tool is designed to deploy and set sub surface flow control devices equipped with R and RN® lock mandrels, landing in corresponding selective or no-go landing nipples.

The running tool can be set up to run devices either in selective or non-selective mode.

By choosing the selective mode, devices can be run through landing nipples (R type – non no-go nipples) of the same size and type, before the operator performs a manipulation at the desired location nipple and sets the device.

In the non-selective mode, the lock mandrel will locate the first corresponding nipple.

Contact your local Hunting Sales Representative for further technical details

Hunting ‘R’ Running Tools are available with various connections to suit customer requirements
