

# Ballistic VariBall™ Roller System

## Slickline Downhole Tools

### Features

- Standard chassis systems allows various roller configurations
- Elliptical self-aligning roller
- Orientated body to ensure roller to tubing contact
- 360° built-in swivel
- Interchangeable end subs to suit customer gun connections and application

### Benefits

- Proven field reliability throughout the VariBall product range
- Short compact design reducing space from bottom shot to top shot of next gun
- Can be run with Huntin Titan EBFire ControlFire® system for multiple gun development in a single run
- Flexibility and adaptability

The Hunting Ballistic VariBall System improves conveyance by reducing friction between the gun body and the tubing when running and retrieving perforating gun strings.

Elliptical rollers minimise contact between the tubing and gun bodies eliminating friction and allowing well bore access in high deviation wells.

Ballistic VariBall features interchangeable end subs allowing multiple configurations options:

- Threaded Gun Connector
- Booster-to-Booster Tandem Sub
- EB Switch Tandem Adaptor Assembly with Port
- Arming Sub Adaptor Assembly with Port

**Ballistic VariBall Chassis are available with various end connections to suit customer requirements.**
