

## Portable Chemical Injection Units

**Hunting Portable Chemical Injection Units are designed to offer a simple, compact and economical method of injecting chemicals such as glycol, methanol or just an inhibitor into the components of a Pressure Control rig up.**

Manufactured using the highest quality components available, housed in a stainless steel frame, with a stainless steel tank and control panel, they are reliable and very long lasting.

Available for 5,000 psi, 10,000 psi and 15,000 psi test pressures, each unit consists of a high quality air driven pump, dressed for glycol and methanol service. Injection fluid is contained within a 20 litre stainless steel tank.

The stainless steel control panel includes a system pressure gauge with a 4" face, along with a shut off valve and the necessary air controls that regulate the pumps.

Various lengths and types of hoses are available to suit all of these units - please refer to accessories section.

The chemical tanks on these compact units are fairly small by necessity. However, systems with much greater capacities are available.

 Available for 5,000 PSI, 10,000 PSI and 15,000 PSI test pressures, each unit consists of a high quality air driven pump, dressed for glycol and methanol service.
